Buy LuciBru (Ibrutinib 140 mg)

LuciBru tablets are designed to fight mantle cell lymphoma. The drug can be prescribed for the treatment of severe stages of the disease, in cases where chemotherapy or surgery did not bring the desired results. LuciBru tablets from the Bangladeshi manufacturer Lucius Pharmaceuticals can be purchased inexpensively online. Before use, you must seek the advice of your doctor or oncologist.

LuciBru Price (Ibrutinib 140mg)

Lucius Pharmaceuticals, which is based in India, received the right to manufacture a drug containing ibrutinib - LuciBru from the World Health Organization in 2016. The original product - "Imbruvika", developed by American pharmacologists of the Pharmacyclics company, has been used since 2014. The original went through all stages of clinical trials, which allows the Bangladeshi manufacturer to skip the research phase of production, as LuciBru is fully compliant with Imbruvik's anti-cancer agent. This has a significant impact on the price of LuciBru, making it affordable for patients. The pharmacy price is also influenced by the direct supply agreement with a Bangladeshi manufacturer.

Reviews of LuciBru (ibrutinib 140 mg)

Studies of the original drug have shown that the active agent of the drug, ibrutinib, has an inhibitory effect on Bruton's tyrosine kinase, reducing the number of B-lymphocytes responsible for the development of lymphoma. In addition, LuciBru triggers anti-tumor immunity, enhancing the protective properties of the whole body. Thus, LuciBru acts on the cells of the malignant tumor, inhibiting and blocking the spread of the disease. LuciBru is approved by the Russian Ministry of Health and has been used by oncologists since 2016.

Description LuciBru (ibrutinib 140 mg)

Each package of the medicine contains 120 tablets. The oblong, oval capsules of LuciBru contain 140 mg of ibrutinib, which acts on the growth of cancer cells by blocking their proliferation. The drug is metabolized during the day and excreted by the kidneys and intestines.

Indications and methods of application

LuciBru tablets are used as a primary or additional agent in the treatment of oncological diseases of the circulatory system. The course provides for a single dose of the drug. According to the instructions, tablets with a single dose of ibrutinib are taken at the same time of day, shortly before a meal or immediately after a meal. The daily dose is equal to one tablet; in exceptional cases, the attending oncologist may revise the dosage of the medication.

Contraindications

The drug is not recommended for use in case of individual intolerance to ibrutinib, in case of malfunctioning of the liver and kidneys, as well as for children under 18 years of age.
