Buy Tykerb

You can buy Tykerb tablets (Lapatinib) from us - this medicine is often used in combination:

- with capecitabine, for people with advanced breast cancer or that has spread to other parts of the body (metastatic), and HER2-positive (tumors that produce large amounts of a protein called human epidermal growth factor receptor-2) and who have already received certain other treatments breast cancer.

- With the drug letrozole for the treatment of postmenopausal women with a hormone receptor - positive metastatic breast cancer, for which hormone therapy is indicated. Tykerb in combination with an aromatase inhibitor has not been compared to a chemotherapy regimen containing trastuzumab for the treatment of metastatic breast cancer.

Tykerb Price

Generic Tykerb costs significantly less than the original drug. At the same time, its formula and active ingredient remain unchanged, which determines the high efficiency of this drug.

Tykerb Reviews

Reviews of Tykerb are mostly positive.

Dosage

The recommended dose of Tykerb for advanced or metastatic breast cancer is 1250 mg (5 tablets) taken orally once a day, 1-21 continuously in combination with capecitabine 2000 mg / m² / day (given orally at intervals of about 12 hours) on days 1-14 in a repeating 21-day cycle.

Tykerb should be taken at least one hour before or one hour after meals. However, capecitabine should be taken with food or within 30 minutes after a meal.

Tykerb should be taken once a day. Do not split daily doses of Tykerb.

Dose adjustment may be required in case of heart problems, severe liver damage, diarrhea, and CYP3A4 drug interactions.

Side effects

1. Tykerb can cause serious side effects, including: heart problems, including decreased pumping of blood from the heart and abnormal heartbeats.
2. Symptoms of an abnormal heartbeat include: a feeling like the heart is pounding or beating; feeling dizzy; dyspnea; fatigue; fatigue.
3. Your doctor should check your heart function before starting Tykerb and during treatment.
4. Liver problems can be severe. Signs and symptoms of liver disease include: itching, yellowing of the skin, dark urine, pain or discomfort in the right upper stomach, pain or discomfort in the right upper abdomen. Your doctor should do a blood test to check your liver before starting Tykerb and during treatment.
5. Diarrhea is common with Tykerb and can be severe at times. Severe diarrhea can lead to fluid loss (dehydration). Call your healthcare professional right away if you have severe diarrhea. Follow your doctor's instructions to find out what to do to prevent or treat diarrhea.
6. Lung problems. Symptoms of a lung problem with Tykerb are a persistent cough or shortness of breath.
7. Severe skin reactions. Tykerb can cause severe skin reactions. Tell your doctor right away if you develop a skin rash, skin redness, blisters on the lips, eyes or mouth, fever, or any combination of these symptoms. Because severe skin reactions can be life-threatening, your doctor may advise you to stop taking Tykerb.

Call your doctor right away if you have any of the signs or symptoms of serious side effects listed above.

Tell your doctor if you have any side effects that bother you or that do not go away. These are not all of the possible side effects of Tykerb. Check with your doctor for more information.
